LEVIS KINYUA MURITHI

Nyeri / Nairobi, Kenya • +254 728 986 236 • yngdennoh@gmail.com • levis.netflix23@gmail.com • github.com/xPoacher

PROFESSIONAL SUMMARY

Highly motivated and detail-oriented Information Technology professional and technical specialist with active experience in AI data annotation, Reinforcement Learning from Human Feedback (RLHF), and prompt engineering. Adept at evaluating complex language models, formulating high-quality evaluation scenarios, and performing rigorous software quality assurance. Combines a strong academic foundation in IT with hands-on expertise in local LLM deployment, network configuration, Active Directory management, and cross-platform development. Proactive approach to problem-solving, eager to leverage these skills to contribute effectively to AI Training programs, such as at Sovrano.

CORE COMPETENCIES

AI & Data Operations	RLHF Evaluation, Prompt Engineering, AI Data Annotation, Scenario Development, Model Benchmarking, Machine Learning Fundamentals, Data Analysis.
Systems & Environments	Kali Linux (GNOME/XFCE), KVM/QEMU, Git/GitHub, Termux, Active Directory, local LLM deployment (llama.cpp, GGUF).
Development & Networking	Python, Java, Kotlin Multiplatform, React, HTML/Tailwind CSS, JavaScript, Cisco Packet Tracer, Wi-Fi config, Firewall rules.
Professional Skills	Software QA, IT Support, Troubleshooting, Technical Analysis, Problem-Solving, Communication, Teamwork, Adaptability, Customer Service.

PROFESSIONAL EXPERIENCE

Freelance Technical Specialist

Self-Employed | Present

- **AI Evaluation & RLHF:** Design and execute complex evaluation scenarios to test and refine artificial intelligence models, providing high-quality human feedback for model alignment and accuracy.
- **Prompt Engineering & QA:** Formulate robust edge-case prompts to test AI reasoning and instruction-following; review code outputs, identify logic flaws or hallucinations, and provide detailed technical QA reports.
- **Model Deployment:** Configure and run quantized GGUF language models locally (e.g., Gemma 2) using compiled llama-server binaries, integrating them with VS Code and Android Studio for continuous testing.

Network Engineering Intern

April 2026 – June 2026

- Completed an intensive eight-week industrial attachment focused on Wi-Fi network engineering, conducting fiber optic installation and splicing to expand coverage and reliability.
- Managed daily network configurations and maintained detailed technical logbooks and weekly performance summaries.
- Built and tested multi-router network topologies to optimize local network routing and security.

IT Assistant
Mathira Constituency, Nyeri | Sept 2022 – Apr 2023

- Supported the IT department with daily operations, including basic network maintenance, setting up student computer labs, and executing software installations across institutional computers.
- Familiarized with network infrastructure and troubleshooting common connectivity problems.

IT Support Intern
Othaya Level 4 Hospital, Nyeri | Jan 2020 – Aug 2020

- Provided first-level technical support to NHIF staff, troubleshooting hardware, software, and network issues.
- Assisted in managing and maintaining the Active Directory environment, including user account creation and password resets.
- Documented common IT issues and resolutions to build a knowledge base for future reference within a corporate setting.

TECHNICAL PROJECTS

AgriTrack: Supply Chain & Farm Management

- Engineered a cross-platform mobile dashboard and web interface using Kotlin Multiplatform and React to connect farmers directly with commercial buyers.
- Authored full proposal documentation, technical requirements, and database scripts to manage real-time inventory and supply chain tracking.

Interactive Developer Portfolio

- Built a responsive web-based capstone project portfolio using HTML, Tailwind CSS, and JavaScript.
- Implemented modern UI/UX principles designed in Figma and deployed the live site on Vercel via direct Git/GitHub integration.

Virtualization & Cybersecurity Home Lab

- Architected local virtualized lab environments utilizing KVM/QEMU via virt-manager. Deployed Windows Server 2022 and Parrot OS.
- Configured complex host-only network interfaces and Active Directory domain controllers to practice secure network administration and vulnerability testing.

Home Network Setup and Security

- Designed and implemented a secure home network configuration, including router setup, firewall rules, and Wi-Fi security protocols.
- Researched and applied best practices for network security to protect against common threats, documenting the configuration process.

Basic Customer Support Chatbot

- Developed a Python chatbot incorporating basic NLP techniques for intent recognition, processing hypothetical customer service queries.
- Gained hands-on experience in scripting and developing conversational interfaces as a precursor to AI applications.

EDUCATION

Bachelor of Science in Information Technology (Final Year)
Sept 2020 – Present

Dedan Kimathi University of Technology | Nyeri, Kenya

Relevant Coursework: Human-Computer Interaction, Internet of Things, Cybersecurity, Systems Analysis and Design.
